

# **SD 2100v2**

## **Depth...Sensitivity and Reliability**

When using a conventional metal detector, the ground mineralisation interferes with the signal, which substantially limits the depth at which a nugget can be detected.

The SD 2100v2, however uses Minelab's exclusive technology known as MPS or Multi Period Sensing. This enables the SD 2100v2 to minimise the effects of mineralisation, to penetrate deeper, and to provide you with an interference free signal.

This effectively has overcome the problem of ground noise, and it essentially only produces a signal on actual metal targets such as a gold nugget.

Ideal for the beginner, couple or experienced prospector. Supplied with the versatile 11" Double-D coil (other coils available as accessories) the ergonomically balanced "S-bend" shaft and the 12 Ah battery and pouch, makes the Minelab SD 2100v2 a comfortable, lightweight machine.

<b>FEATURES</b>		
Length	Maximum	1370mm
	Minimum	1100mm
Weight	Complete (excluding battery)	2.4kg
Configuration		Shaftmount
Technology		Multi Period Sensing (MPS)
Ground Rejection		Manual Ground Balance
Battery		6V 12Ah Gel Cell
Coil		11" Double D
Metal Arm Rest, Neoprene Cover & Strap		
<b>Controls</b>		
On/Off		2 pos. switch
Threshold		1 turn control
Tone		1 turn control
Tune		1 turn control
Ground Balance		2 turn controls
Headphones		
1/4" Headphone Jack		Stereo/Mono
<b>Accessories</b>		
Coils		8", 11" & 18" Monoloop
Car Charger		12V, Cigarette lighter plug
Mains Charger		240V
<b>Warranty</b>		
Control Box		2 years
Coil		1 year
